# Say hello to Liberty WiFi

Don't let WiFi issues get you down

Here are step by step instructions to get your Liberty router up and running.
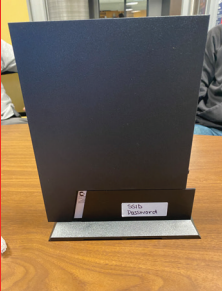

You can also visit **bit.ly/2Ur1iq2** for video instructions.

1 Verify your name and address are on the front of the box.

2 Remove contents in the box.

Your box should include:
a. Router
b. Base with SSID and password
c. Power cord
d. Ethernet cord

3 Put router on base

4 Plug one end of the Ethernet cord into the white Ethernet port that says "ETH-WAN" and the other end of the cord into the data jack in your home. This jack may have a label on it. If you cannot find your data jack, please call our office and we can help you locate it.

5 Plug the power cord into the black port that says, "POWER" on the back of your router then plug it into a regular outlet.

6 Push "ON/OFF" button. It will click down.

7 Wait about ten minutes for the firmware to update and your router to become operational.
